

Notelac Platform - Testing Report

Module: Territory Partner Panel

This report summarizes the testing performed on the Territory Partner panel of the Notelac platform.

1. Dashboard → Add New Event → Event Name: Numeric values are not allowed. Example: 'Winter Marathon 2026' only accepts 'Winter Marathon'.
2. Dashboard → Add New Event → Venue Name: Special characters like comma are not supported. Example: 'Yashwant Stadium, Nagpur' cannot be entered properly.
3. Dashboard → Add Organizer (Critical Issue): After filling all data and submitting, an error appears: 'Input Validation Error: GST number'. However, GST field is missing in frontend.
4. Dashboard → Add New Event (Submission Issue): After filling all details and clicking 'Register Event', no action occurs and event is not created.
5. Event → Add New Event → Type of Event: No dropdown present, appears fixed (e.g., 'Marathon').
6. Event → Add New Event → Start Time & End Time: AM/PM not specified, causing ambiguity.
7. Data Entry → Add Data Entry → Organizer Company: Only 5 characters allowed, which is too restrictive.
8. Data Entry → Add Data Entry → Expected Participants: Accepts string instead of numeric input.

Key Observation:

Due to critical issues where Organizer cannot be created and Events cannot be registered, further modules such as Inventory, Reports, and other features could not be fully tested. These modules depend on successful creation of organizers and events.
