

PRODUCT REQUIREMENTS DOCUMENT

[Insert Project / Product Name]

Product Name	[Insert Name]	Document Date	[Month DD, YYYY]
Project Type	[Web App / Mobile App / SaaS]	Document Status	[Draft / Final / Approved]
Product Owner	[Name of PO]	Version	v1.0

1. OVERVIEW

- Product Name & Tagline:** [Product Name] - "[Insert Catchy Tagline/Core Value]"
- Type of Project:** [e.g., Web App / Mobile App / SaaS / Platform / API Service]
- Background / Context:** [Explain the origin of the product idea. Why are we building this now? What changes in the market or business necessitate this product?]
- Goal / Objective:** [State the primary business and user goals. E.g., Increase efficiency by X%, generate Y revenue, or automate Z process.]

2. PROBLEM STATEMENT

- What problem exists today:** [Describe the pain point, inefficiency, or gap in the market.]
- Who is affected:** [Describe the specific users, departments, or customers dealing with this problem.]
- Why current solutions fail:** [Explain why existing tools, competitors, or manual workarounds are not sufficient.]

3. SOLUTION WE PROVIDE

- What we are building:** [High-level summary of the product.]
- How it solves the problem:** [Explain the mechanism of the solution. E.g., "By automating data entry, it eliminates human error..."]
- Key differentiators:** [What makes this product unique compared to existing alternatives?]

4. STAKEHOLDERS

- **Product Owner:** [Name/Role]
- **Developers:** [Name/Role or Team Name]
- **Designers:** [Name/Role or Team Name]
- **Business / Client:** [Name/Role or Department]
- **End Users:** [List user groups, e.g., Operations Managers, Field Agents, End Customers]

5. USER ROLES

- **Super Admin:** [Define what they can do - e.g., System-wide access, billing management, role configuration.]
- **Admin / Manager:** [Define what they can do - e.g., Dashboard oversight, reporting, approval workflows.]
- **Standard User:** [Define what they can do - e.g., Daily operational tasks, data entry, restricted view.]
- **[Add Custom Role]:** [Define permissions.]

6. REQUIREMENTS

Functional Requirements

- **Feature A:** [Describe what the system should do. E.g., "Users must be able to log in via SSO."]
- **Feature B:** [E.g., "System must generate a weekly PDF report automatically."]
- **Feature C:** [E.g., "Dashboard must display real-time analytics for X, Y, and Z."]

Non-Functional Requirements

- **Performance:** [E.g., "Page load times must be under 2 seconds."]
- **Security:** [E.g., "Data must be encrypted at rest and in transit (AES-256)."]
- **Scalability:** [E.g., "System must support up to 10,000 concurrent users."]

7. PHASES

Phase	Focus	Key Deliverables
Phase 1: Core MVP	Primary workflows & core value proposition.	• User Authentication • Core Data Input UI • Basic Output/Reporting
Phase 2: Extended Features	Integrations and enhanced user experience.	• 3rd Party API integrations • Automated Email/SMS Notifications • Advanced Dashboard Charts
Phase 3: Scale / Optimization	Refinement, speed, and advanced modules.	• Machine Learning / AI modules • Bulk Export / Import optimization • Multi-language support

8. TECH STACK

- **Frontend / Mobile:** [e.g., React.js, Tailwind CSS / Flutter]
- **Backend:** [e.g., Node.js, Python/Django, Java/Spring Boot]
- **Database:** [e.g., PostgreSQL, MongoDB, Redis]
- **Third-party APIs / Services:** [e.g., Stripe for payments, SendGrid for emails, Google Maps API]
- **Hosting / Cloud:** [e.g., AWS (EC2, S3), Google Cloud Platform, Vercel]

9. TIMELINE & MILESTONES

Milestone	Deliverable	Duration / Date
M1: Design & Prototyping	Wireframes, UI/UX Mockups, Design Sign-off	[Week 1 - Week 3]
M2: Backend API & DB setup	Database schema, core REST APIs, Authentication	[Week 4 - Week 6]
M3: Frontend Integration	UI development, API binding, state management	[Week 7 - Week 10]
M4: UAT & QA	Bug fixing, User Acceptance Testing, Security Audits	[Week 11 - Week 12]
M5: Go-Live	Production deployment, MVP Launch	[Week 13]

10. RISKS & DEPENDENCIES

Risk / Dependency	Impact	Mitigation Strategy
Third-party API limits (Dependency)	High: Could break core functionality if rate limits are exceeded.	Implement caching (Redis) and staggered background jobs to respect limits.
Scope Creep (Risk)	Medium: Will delay the Phase 1 (MVP) launch date.	Strictly enforce the PRD sign-off. Any new feature goes to the Phase 2 backlog.
Client Data Readiness (Dependency)	High: Cannot test the system accurately without real-world data.	Request mock datasets early in Week 2. Provide CSV templates to the client.

11. SUCCESS METRICS (KPIs)

- Adoption:** Achieve [X] Daily Active Users (DAU) within the first 30 days.
- Performance:** System API response times maintained under [X] milliseconds.
- Business Metric:** Reduce manual processing time by [X]%.

- **Retention/Revenue:** [Insert relevant metric, e.g., Monthly Recurring Revenue (MRR) hits \$X].

12. PROJECT SIGN-OFF & AUTHORIZATIONS

By signing below, the stakeholders acknowledge that they have reviewed, understood, and agreed to the product specifications, phases, and requirements detailed within this Product Requirements Document.
