

PRODUCT REQUIREMENTS DOCUMENT

Lumina LMS — Multi-Tenant SaaS Learning Platform

Product Name	Lumina LMS	Document Date	April 29, 2026
Project Type	SaaS Web Application	Document Status	Final
Product Owner	Prit Ukey	Version	v1.0

1. OVERVIEW

- Product Name & Tagline:** Lumina LMS — "Train. Track. Transform."
- Type of Project:** Multi-Tenant SaaS Web Application
- Background / Context:** Organizations struggle to manage employee training efficiently across departments and roles using fragmented, outdated systems. Existing LMS platforms lack flexibility, multi-company support, and meaningful analytics — forcing HR teams to rely on manual tracking and disjointed tools.
- Goal / Objective:** Provide a scalable, modern LMS that enables organizations to manage courses, automate assessments, and track employee performance in real-time — reducing manual training overhead and improving learning outcomes across the board.

2. PROBLEM STATEMENT

- What problem exists today:** Corporate training is fragmented and inefficient. HR teams rely on spreadsheets, email chains, and legacy LMS tools that don't scale, lack real-time analytics, and require significant manual effort to maintain.
- Who is affected:** HR Managers, Company Admins, and Employees across all departments who require structured, trackable, and accessible learning workflows.
- Why current solutions fail:** Existing LMS platforms suffer from poor user experience, no true multi-tenant architecture, limited quiz customization, no bulk content upload support, and a lack of AI-enhanced features for content and quiz generation.

3. SOLUTION WE PROVIDE

- What we are building:** A scalable, multi-tenant SaaS Learning Management System with structured course management, an advanced quiz engine, real-time analytics dashboards, and AI-powered content tools.

- **How it solves the problem:** By centralizing course management under a single platform with role-based access, automating quiz grading and progress tracking, and supporting bulk content uploads via Excel/JSON — Lumina LMS eliminates manual effort and delivers measurable learning outcomes.
- **Key differentiators:** True multi-tenant SaaS architecture with full data isolation per company; Excel-based bulk quiz uploads; granular progress tracking with per-answer analytics; premium dark-mode UI with Stripe-like UX quality.

4. STAKEHOLDERS

- **Product Owner:** Prit Ukey
- **Developers:** Prit Ukey (Solo Full-Stack Developer)
- **Designers:** Prit Ukey (UI/UX Designer)
- **Business / Client:** Company Admins using the platform for employee training
- **End Users:** Employees, HR Managers, Super Admins

5. USER ROLES

- **Super Admin:** Platform-wide control — manages companies, billing, approvals, global settings, and onboarding flows.
- **Admin:** Company-level control — creates and manages courses, modules, quizzes, and all learning content within their organization.
- **HR Manager:** Assigns courses to employees, monitors individual and team progress, generates performance reports.
- **Employee / User:** Consumes learning content (videos, notes, assignments), attempts quizzes, views personal progress and certifications.

6. REQUIREMENTS

Functional Requirements

- **Authentication:** Secure JWT-based user authentication with role-based access control (Super Admin, Admin, HR, Employee).
- **Course & Module Management:** Full CRUD for Courses → Modules → Content (Videos, Notes, Quizzes, Assignments) with modular, extensible structure.
- **Advanced Quiz Engine:** Supports MCQ, Fill-in-the-Blanks, Short Answer, and Coding question types with automated grading and percentage-based pass/fail logic.
- **Bulk Quiz Upload:** Import quizzes in bulk via Excel / JSON format with strong server-side validation and error reporting.
- **Progress Tracking:** Granular tracking of video watch time, notes viewed, quiz attempts, and module completion with automatic status updates.
- **Analytics Dashboards:** Role-specific dashboards — Admin (platform overview), HR (employee progress), Employee (my learning journey).
- **Course Certification:** Automated certification issued only after full module completion is verified by the system.
- **Multi-Tenant Engine:** Full data isolation per company using `company_id` scoping across all models. Company onboarding with simulated payment flow.

Non-Functional Requirements

- **Performance:** Page load times and API response times maintained under 2 seconds under normal load.
- **Security:** JWT-based authentication, role-based access control, and scoped data access to prevent cross-tenant data leakage.
- **Scalability:** Multi-tenant PostgreSQL architecture with optimized queries and indexing to support growth across multiple companies and thousands of users.

7. PHASES

Phase	Focus	Key Deliverables	Duration
Phase 1: Core LMS (MVP)	Authentication, core course structure, and basic quiz functionality.	• JWT Authentication & RBAC • Course & Module Management • Basic MCQ Quiz System • Employee Progress View	Day 1 – Day 3
Phase 2: Advanced Features	Bulk uploads, analytics dashboards, and extended quiz types.	• Excel/JSON Bulk Quiz Upload • Real-time Analytics Dashboard • Fill-in-Blank, Short Answer & Coding Questions • Quiz Review UI (Your Answer vs Correct Answer)	Day 4 – Day 5
Phase 3: SaaS Scale	Multi-tenant SaaS architecture and platform polish.	• Multi-Company Onboarding & Billing • Course Certification System • Premium UI Redesign (Stripe-level UX) • Bug Fixes & Performance Optimization	Day 6 – Day 7

8. TECH STACK

- **Frontend:** Next.js 14+ (App Router), TypeScript, TailwindCSS, ShadCN UI, Framer Motion, Lucide React
- **Backend:** FastAPI (Python)
- **Database:** PostgreSQL with SQLAlchemy ORM
- **Validation & Auth:** Pydantic models, JWT-based authentication
- **Libraries:** Pandas (bulk upload processing), SQLAlchemy (ORM)
- **Hosting / Cloud:** Currently in active development — local environment (Localhost). Planned deployment: Vercel (Frontend), Cloud Server (Backend & DB).

9. TIMELINE & MILESTONES

Day	Milestone	Key Deliverables
Day 1	Project Foundation & Admin Panel	• Full folder structure setup (FastAPI backend + Next.js frontend) • Home page built and running • Basic Admin Panel with Login / Logout functionality
Day 2	Auth & Database Setup	• Dark theme UI implemented across the platform • JWT-based authentication integrated • PostgreSQL database connected and configured
Day 3	Multi-Role Panels & Core LMS	• HR and Employee user panels created • Role-specific dashboards built (Admin, HR, Employee) • Course and Module management system implemented
Day 4	Module Content Features	• YouTube lecture link integration inside modules • Notes feature added • Deliverables / Assignments system built • Quiz system created and linked to modules
Day 5	Dashboard Polish & Profile	• Digital / analytics-style dashboard improvements • Profile section built for users • Overall UI polished and refined with modern digital aesthetics
Day 6	Super Admin & Payment System	• Super Admin panel created with platform-wide controls • Multi-company onboarding flow implemented • Simulated payment system for company subscriptions
Day 7 (Today — In Progress)	Excel Quiz Upload & Bug Fixes	• Bulk quiz upload via Excel sheet (eliminates manual quiz entry) • Bug fixes across modules and quiz system • Minor UI improvements and stabilization

10. RISKS & DEPENDENCIES

Risk / Dependency	Impact	Mitigation Strategy
Database Scaling Issues (Risk)	High: As companies and users grow, unoptimized queries can degrade performance significantly.	Implement optimized PostgreSQL queries, proper indexing, and connection pooling from the start.
Bulk Upload Errors (Risk)	Medium: Malformed Excel/JSON files could cause system crashes or silent data corruption.	Implement strict server-side validation with detailed error feedback and row-level error reporting.
UI Complexity (Risk)	Medium: Multi-role dashboards and advanced quiz UI increase development and maintenance complexity.	Follow iterative UX improvement cycles; use ShadCN component library to maintain consistency and reduce rework.

11. SUCCESS METRICS (KPIs)

- **User Adoption:** Achieve measurable Monthly Active User (MAU) growth across onboarded companies within the first 60 days.
- **Course Completion Rate:** Target $\geq 70\%$ course completion rate among assigned employees per company.
- **Quiz Performance:** Track quiz pass rates and average scores per course to measure content effectiveness.
- **System Performance:** Maintain API response times under 2 seconds under concurrent multi-company load.
- **Platform Engagement:** Track DAU/MAU ratio and average session duration as indicators of product stickiness.

12. PROJECT SIGN-OFF & AUTHORIZATIONS

By signing below, the stakeholders acknowledge that they have reviewed, understood, and agreed to the product specifications, phases, and requirements detailed within this Product Requirements Document.
